

Blackhawk™ 5720 Membrane

SELECTION & SPECIFICATION DATA

Type Asphalt Modified Polyurethane

DescriptionBlackhawk 5720 Membrane is a two-component elastomeric compound of asphalt and polymers

formulated for mixing and spraying at ambient temperature. It cures (by an in situ chemical reaction) to a tough, abrasive-resistant film which shows almost 100%

elastomeric recovery from mechanical stress.

Features

Exempt from hazardous declaration under DOT regulations

Uses

· Waterproof coating over insulation

Excellent barrier against weather and moisture vapor

Excellent adhesion to insulation, metal, and other substrates

· Low temperature properties

 May be used as a moisture-vapor barrier coating above and below grade

· Protect metals and wood against corrosion

Resistant to ultraviolet degradation

Cement pre-formed insulation to piping or vessels

· Adhere blocks of insulation together

Recommended where movement of insulation will be encountered

Color Black

Primer Self-priming on most concrete and metal surfaces.

Novocoat SC1100 Primer/Sealer may be used to reduce the risk of outgassing on concrete.

Topcoat Aggregate broadcast or coatings

Finish Gloss

Solids 68 - 78% by weight

Content

VOC Value(s) <350 g/L

Limitations Blackhawk 5720 should not be used where it will be

exposed to high concentrations of oil or organic

solvents.

SUBSTRATES & SURFACE PREPARATION

All surfaces must be clean and free from debris and loose scale material or anything that may interfere

with adhesion or act as a bond breaker with the

desired substrate.

Concrete and Concrete Masonry Unit (CMU) Concrete or CMU Concrete must be cured minimum 7 days at 75°F (24°C) and 50% relative humidity or equivalent. Prepare surfaces to expose aggregate. Voids in concrete may require surfacing. Mortar joints should be cured a minimum of 15 days.

Previously Painted Surfaces Consult with ErgonArmor Technical Service.

MIXING & THINNING

Mixing The viscosities of the two components are such

that the contents of Part B container can be readily poured into the Part A and mixed at product temperatures above 60°F. An electric or air driven mixer (generating a vigorous vortex) is recommended. A standard metal, square head mixing blade having a minimum 8-inch head width is suggested and is available from multiple online and retail store suppliers.

Mix Part A for a 1 minute premix to reduce viscosity and ensure homogeneity. With vortex created, add Part B hardener slowly over a period of at least 45 seconds. Move the mix blade around in the pail to ensure full dispersion of the Part B hardener for 3 minutes. Proper blending of the Part A and Part B occurs when a slight vortex appears on top of the blend while mixing. Upon completion, place mix head in empty pail and spin off excess material hanging on mix blade.

Do not allow moisture contamination into the

 $\,$ mix. Do not mix by hand.

Thinning Do not thin

Pot Life 30 minutes at 32°C (90°F)

40 minutes at 24°C (75°F) 50 minutes at 16°C (60°F) Not recommended below 60°F.

Cleanup Mineral spirits

APPLICATION GUIDELINES

Brush Use a medium/thick bristle brush

Dry-To-Touch 4 hours at 77°F (25°C)

Full Cure 24 hours at 77°F (25°C)

Blackhawk™ 5720 Membrane

PACKAGING & HANDLING

ITEM# PACKAGING

K-5720-005-001-UN Part A - Pail - 4.5 gallons

Theoretical Coverage Rate 40 - 50 square feet per gallon at 30 mils.

Storage & Shelf Life Estimated shelf life is 12 months when stored in a dry area at 75°F (24°C). Actual shelf life may vary with storage conditions. Do not store below 40°F (4°C) or above 110°F (43°C). Store indoors. This product is not affected by excursions below these published storage temperatures, down to 10°F, for a duration of no more than 14-days. Always inspect the product prior to use to make sure it is smooth and homogeneous and properly mixed.

SAFETY

Safety Mixes and applications of this product present a

number of hazards. Read and follow the hazard information, precautions and first aid directions on the individual product labels and safety data sheets

before using.

Ventilation Thorough air circulation must be used during and

after application until the product is cured. User should test and monitor exposure levels to insure

all personnel are within safe limits.
